SKILLS & AWARDS

Programming: C, C++, C#, Python, JavaScript, Networking, Object-Oriented & Asynchronous Programming

Tools: Unity, Unreal, Godot, Git, Perforce, Touch Designer, VR/XR, Shader & VFX Graph

AI & Workflow: AI coding agents, LLM integration

Awards: Games for Change 2026 Best in Health & Wellness Nominee (*Camp Movewell*); Global Game Jam Pittsburgh Non-Traditional Game Award (*Mento-Issue*)

EDUCATION

Carnegie Mellon University

Master of Entertainment Technology

Pittsburgh, PA, USA

Aug 2024 – May 2026

National Yang Ming Chiao Tung University

B.S. in Electrical and Computer Engineering

Hsinchu, Taiwan

Sep 2019 – Sep 2023

EXPERIENCE

iCan Entertainment

Game Client Intern (Unity)

Taipei, Taiwan

Jun 2025 – Aug 2025

- Delivered 3 player-facing UI screens and a slot machine minigame within a fixed monthly release cycle for *God Convenience Store*, a live mobile title on iOS and Android.
- Prototyped 5 experimental game modes under open-ended R&D direction; 2 were selected and promoted to the live game, integrating with backend systems to support real-time data updates, achieving a 40% prototype-to-production rate.
- Refactored gameplay systems using UniRx, UniTask, and Zenject to decouple event handling and async flow.

Wistron NeWeb Corporation

Advanced Technology Development Intern

Hsinchu, Taiwan

Aug 2022 – Nov 2022

- Analyzed web-gaming packet behavior, then implemented C and Lua QoS on the router backend, using deep packet inspection to prioritize gaming and streaming traffic across 5 traffic classes.
- Rebuilt the router web interface in JavaScript with sortable views for dedicated gaming traffic.

PROJECTS

Borderless

Jan 2026 – May 2026

- Engineered a real-time networking system for a 4-device mobile game, designing a host-client architecture with custom clock calibration to reduce game state synchronization latency from up to 3 seconds to under 30ms.
- Designed and implemented a spatial interaction model where players physically move their phones in 3D space as the core puzzle mechanic, validated across ~30 playtesting sessions (2-4 players each). Demoed the build at a GDC booth and the ETC project showcase, where industry guests wanted that mechanic carried into other genres.

Camp Movewell

Aug 2025 – Dec 2026

- Built a WebSocket streaming layer to deliver live sensor data simultaneously to an exergaming application and a web-based controller, contributing to a system nominated for Best in Health & Wellness at the Games for Change 2026 Festival.
- Architected a modular sensor data pipeline for smart shoes, filtering outlier samples on the Bluetooth stream so a bad reading would not jump the movement data.

XHaler

Jan 2025 – Apr 2025

- Programmed gameplay for a 5-level VR breathing experience on a 5-person team over a 14-week semester, mapping custom biosensor data onto game states and tuning feedback to each player's breathing.
- Conducted usability testing with ~30 players, identifying 3 critical immersion blockers; iterated on mechanics and systems until players could navigate the full experience without guidance, transitioning from a guided to a fully self-directed play flow.
