SUMMARY

Gameplay programmer with a strong collaborative spirit and a passion for crafting innovative and engaging player experiences, with expertise in Unity, programming, and game design. Driven to share the joy of play with others, and by the belief that the best form of learning happens when players are having fun.

SKILLS

Programming: C, C++, C#, Python, JavaScript, Networking, Object-Oriented & Asynchronous Programming

Tools: Unity, Unreal, Git, Perforce, VR/XR, Shader & VFX Graph

AI & Workflow: Claude Code, AI-assisted development, LLM integration

EXPERIENCE

iCan Entertainment

Taipei, Taiwan

Game Client Intern (Unity)

Jun 2025 – Aug 2025

- Developed player facing UI features and a slot machine minigame in a live monthly update for *God Convenience Store*, a released mobile title.
- Prototyped 5 experimental game modes, 2 of were featured in the live game, integrating with backend systems to support real time data updates.
- Programmed scalable gameplay systems leveraging UniRx, UniTask, and Zenject to streamline event handling, async flow, and modular architecture.

Wistron NeWeb Corporation

Hsinchu, Taiwan

Advanced Technology Development Intern

Aug 2022 – Nov 2022

- Researched network protocols and packet characteristics to enhance web gaming support in a router backend, contributing C and Lua implementations.
- Improved the router web interface in JavaScript to deliver a more intuitive user experience.

PROJECTS

Borderless

Jan 2026 – May 2026

- Engineered a low latency real time networking system using a host client model with custom calibration methods to synchronize visuals and game state across multiple mobile devices with millisecond precision.
- Introduced a novel interaction model where players physically reposition and move their phones in space as the core puzzle mechanic, redefining the relationship between player and screen.

ReNushu

Aug 2025 – Dec 2026

- Architected decoupled and expansion ready data infrastructure for smart shoe sensors, incorporating noise filtering for clean signal acquisition and reliable transmission of real time movement data.
- Implemented WebSocket based streaming to deliver live sensor data to both the exergaming application and a controller web app.

XHaler

Jan 2025 – Apr 2025

- Led gameplay programming for a 5 level VR game built around breathing mechanics, integrating custom sensors to create real-time feedback loops targeting specific breathing patterns.
- Identified 3 key blockers to player immersion through usability testing and iterated on design and systems to align player experience with design intent.

EDUCATION

Carnegie Mellon University

Master of Entertainment Technology

Pittsburgh, PA, USA

Aug 2024 – May 2026

National Yang Ming Chiao Tung University

B.S. in Electrical and Computer Engineering

Hsinchu, Taiwan

Sep 2019 – Sep 2023
